The Stanford Institute for Innovation in Developing Economies (SEED) was established in 2011, with an extraordinary gift from Stanford alumnus and venture capitalist Robert King, MBA 1960, and his wife Dorothy King.
I joined the Stanford Institute for Innovation in Developing Economies (SEED) in August 2012, towards the end of its first fiscal year, and the year following has been one of both learning by doing and taking significant strides on our ambitious journey to make a massive impact on the lives of the poor in developing economies—in the foreseeable future.

SEED’s first year demonstrated the agility of the young institute as it launched a variety of signature events:

- Convention of global fund managers, in collaboration with the Stanford Management Company
- The Stanford-Endeavor Leadership Program
- Development of case studies for Stanford students

For our second year, we have focused on distilling our strategy, especially as it relates to our work on the ground in developing economies.

Importantly, we also established SEED West Africa—our first regional innovation center—in Accra, Ghana.

The launch events in Ghana were received with high energy and enthusiasm and attended by representatives from a number of countries covering a broad spectrum of potential stakeholders, including governments, multilateral organizations, universities, financial/investor institutions, and civic organizations.

Our founding donors Dottie and Bob King joined us for the launch, as did Stanford Business School Dean Garth Saloner, SEED faculty who taught in our inaugural workshops, and Stanford faculty who support us in a variety of ways.

The reception and current progress of the Transformation Program—SEED’s signature initiative in West Africa, which includes 29 high potential companies from 5 West African countries—has more than met our expectations.

A special thanks is due to our alumni volunteer coaches and both Stanford and local staff who have shown great dedication and commitment to SEED’s mission.

As the second year closes, we have revisited and affirmed our strategy to integrate our assets at Stanford—including faculty, students, and alumni—with direct and sustained presence on the ground as a distinctive feature of our approach to accomplish our mission.

The agenda for year three is topped by plans to inaugurate our second regional innovation center, this time in East Africa.

Additional priorities focus on firmly establishing our programs, broadening our engagement at Stanford and on the ground, and further defining our platforms and strategy for sustainability and scalability.

Finally, it is important to note that over the past year we have enjoyed extraordinary support from many groups within Stanford and the GSB. As we have navigated new waters, with no precedents or charts to follow, we are thankful for the entrepreneurial support that allowed us to accomplish so much in a short time.

—Dr. Tralance Addy, Executive Director
Despite improvements achieved through the United Nations Millennium Development Goals, poverty continues to challenge global organizations intent on providing relief to the over 1 billion people who live in poverty.

The Stanford Institute for Innovation in Developing Economies (SEED) bridges a critical gap in global efforts to address prosperity around the world. While our approach may differ, our goals align with those who focus on the private sector as the engine for sustainable growth.

As various organizations have concluded, the role of the private sector in creating and expanding enterprises is among the most effective sustainable vehicles in addressing poverty—if not the most effective.

It is estimated that by 2015, there will still be more than 1 billion people on earth living in poverty. Jobs and job creation are of critical importance to poverty reduction. Jobs promote economic mobility and social cohesion and provide solid foundations for improving social and political stability.

SEED aims to stimulate the creation of economic opportunities that reach and benefit people who live in poverty through innovation, entrepreneurship, and the growth of businesses.

---

1Established at a United Nations conference in 2000, the Millennium Development Goals aim to reach specific development targets by 2015. For more information visit www.un.org/millenniumgoals

2World Bank; IFC.
The Stanford Institute for Innovation in Developing Economies (SEED) seeks to stimulate the creation of economic opportunities through innovation, entrepreneurship, and the growth of businesses that change the lives of people who live in poverty around the world.

**MISSION**

**VISION & VALUES**

- **INNOVATION**: A culture of creative restlessness that challenges the status quo to produce world-class innovations.
- **SEED’S VISION**: To be distinguished by leadership in the integration of knowledge and direct action to spur innovation, entrepreneurship and business scale that benefit the poor in developing economies.
- **IMPACT ON LIVES**: We measure ultimate success by the enhancement of the lives of people who live in poverty.
- **ETHICS**: We will hold ourselves and those with whom we work to the highest ethical standards.
- **EMPATHY**: Deep understanding and appreciation of the people and communities in which we work.
- **TOLERANCE**: High tolerance for passionate and unconventional views.
SEED's ambitious goals on the ground are anchored by regional innovation centers which serve as focal points for a wide range of programs and services to entrepreneurs, businesses and other stakeholders. Targeting local and regional businesses with exceptional growth and impact potential, centers offer experiential learning workshops to promote innovation and the scaling of businesses. Centers also form the nucleus of our initiatives to build supportive ecosystems.

**KEY DISTINCTIONS**

- Physical and sustained presence on the ground
- Regional innovation centers as focus points of direct engagement
- Multifaceted training and experiential learning
- Facilitate/enhance ecosystems
- Long-term, hands-on coaching
- Special focus on critical barriers to entrepreneurship and business growth
West Africa is a rapidly growing region where efforts to scale businesses will pay massive dividends in the form of jobs and life improvements.

By 2040, Africa’s working-age population (ages 15-64) is projected to rise from 500 million to well over 1 billion.

Sources: UN World Population Prospect; African Development Bank.
**Priority Sectors**

*SEED’s goal is to transform lives on a massive scale. In order to achieve large-scale impact, our business-building initiatives preferentially target sectors that have been demonstrated to yield high economic and social returns, including:*

- Healthcare
- Education
- Food & Nutrition (Incl. Agriculture)
- Energy
- Water & Sanitation
- ICT Enablers

The opening of SEED’s first regional innovation center in West Africa marks a milestone in our efforts to drive entrepreneurship and innovation through direct on-the-ground engagements in West Africa. We are excited about the impact these efforts will have on businesses and their ability to scale the growth of their companies. This is just the beginning.

Garth Saloner  
*Philip H. Knight Professor and Dean, Stanford Graduate School of Business*
As centers become fully established, they will offer programs for the following target audiences:

| Aspiring entrepreneurs with viable concepts and with promise to scale but with minimal or no revenues. |
| Small and emerging businesses with annual revenues greater than $150,000 up to approximately $10 million |
| Established growing and “stalled” businesses with revenues in the range of $10 to $20 million. |
| Well-established businesses with revenues in excess of $20 million. |

**Targeted Program Offerings At Regional Innovation Centers**

*SEED programs offer on the ground engagement and sustained support to stimulate economic opportunities providing aspiring entrepreneurs and emerging businesses in the regions in which we operate with practical management training, networking opportunities, and, uniquely, continuous hands-on coaching, designed to accelerate new enterprise formation and scale.*

**CLIENT PERSPECTIVE**

We are producers of fresh herbs, vegetables, and fruits—we grow the vegetables, herbs and fruits, we package them, and send them out to the shops.

I’m like a sponge, I’m here to soak in knowledge, innovation, experience, the know-how—so that when I take this to my company, we’ll use it to turn my company around.

And one day, I will also be in a position to give back to someone who also is ready to learn.

*Catherine Krobo Edusei*
Managing Director
Eden Tree Limited

• SEED hires first Executive Director

Milestones 2012

• SEED Challenge for MBA Class of 2014

The SEED Challenge is a graded assignment all first-year MBA students must take during their first quarter at the Business School. Teams select a case study from a developing economy and pick a specific topic or need for which they develop and present a business plan. Finalists present their ideas and plans to an audience of faculty and alumni and the winning team is celebrated during the Executive Challenge, which follows the next day.

DECEMBER

Why is the institute called SEED?

The institute became known as SEED even before its official announcement in November 2011. The nickname came about naturally as the institute’s actual acronym (SIIDE) lends itself to being pronounced SEED, a term its founders and supporters embraced for its fitting metaphor.
Milestones 2013

APRIL

• Registration of Ghanaian entity granted.

• First team of volunteer business coaches selected and announced.

MAY

• Launch of *Value Chain Innovations in Developing Economies: Exploring the Future*.

• Kriss Deiglmeier, Executive Director, Center for Social Innovation, Stanford Graduate School of Business leads extensive on the ground efforts to assess the viability of SEED operating in Myanmar.

JUNE

• 10 student teams showcase their projects during the 2013 Extreme Affordability Design Expo.

• Briefing over 20 ministers, ambassadors, government representatives and business leaders in West Africa in advance of launch of regional innovation center in Ghana.

• Business Operation permit granted.

• Volunteer business coaches arrive in Ghana.

---

SEED Faculty Director for Product and Service Innovations James Patell's interdisciplinary course *Design for Extreme Affordability* celebrates its 10th anniversary.

To date, students have completed 90 projects with 27 partners in 18 countries.

The course was also the subject of a 30-minute segment on CNN's *The Next List*. 

The Myanmar assessment team clockwise from top left: Kriss Deiglmeier, David Janka, David Klaus, and Jim Patell.

Volunteer business coaches (from left): Ed Forman, Bill Scull, Clinton Etheridge, and Kweku Fleming (not shown is Jan Swanberg).
JULY

• **14-20**th - Thirty-six executives representing 29 companies from Cote d'Ivoire, Ghana, Nigeria, Senegal, and Sierra Leone begin inaugural Transformation Program.

• **18**th - Official launch of center in West Africa with opening celebrations at the Ghana College of Physicians and Surgeons in Accra, Ghana.

---

**SPEAKERS AND PANELISTS AT OPENING CELEBRATIONS**

- **Mr. J. Kofi Bucknor (MC)**
  Managing Partner, Kingdom Zephyr Africa

- **Dr. Tralance Addy**
  Executive Director, SEED

- **Hon. Dr. Kassi Jean-Claude Brou**
  Minister of Industry
  Cote d'Ivoire

- **Madame Marthe Ehui**
  President of the Federation of Small Enterprises
  Cote d'Ivoire

- **Dr. Shaibu Ahmed Gariba**
  Director General at the Management Development and Productivity Institute
  Ghana

- **Hon. Haruna Iddrisu**
  Minister for Trade and Industry
  Ghana

- **Hon. Omobola Johnson**
  Minister of Communication & Technology
  Nigeria

- **Prof. Garth Saloner**
  Dean of the Stanford Graduate School of Business
Milestones 2013

AUGUST

- Impact assessment begins.
- Stanford MBA Admissions holds packed information session at center.
- Committed to serving the communities in which we operate, SEED launches Community Outreach program, introducing creativity, design thinking and innovation to future innovators and inventors. Program targets high school and polytechnic students.
- SEED announces weekly Development Economic Workshop Series

SEPTEMBER

- Transformation Program - Workshop II in West Africa: Topics include operations (James Patell) and strategy (Stuart Coulson)
- Stuart Coulson (l), Consulting Associate Professor, Stanford d.school, during the Strategy session with client Richard Olatunde Fadiora, Group CEO for Richard Brainsworth Resources Limited, Nigeria.
- SEED Challenge for MBA Class of 2015.

OCTOBER

- Omobola Johnson, Nigeria’s Minister of Communication Technology, and Professor Adebowale Adefuye, Nigeria’s Ambassador to the United States, visit Stanford University to discuss the development of Nigeria’s technology sector.
- Omobola Johnson, Nigerian Minister of Communication Technology

NOVEMBER

- Transformation Program - Workshop III in West Africa: Topics include Accounting (Madhav Rajan, Senior Associate Dean for Academic Affairs at the Stanford Graduate School of Business), governance, and ethics.
- Madhav Rajan offers an immersive workshop in accounting at the SEED center in West Africa for prospective MBA students.

DECEMBER

- SEED Challenge for MBA Class of 2015.
Research Initiatives

Value Chain Innovations Research Initiative

In May, SEED welcomed 35 supply chain academics, nonprofit and corporate leaders from around the world who met at the Stanford Graduate School of Business to discuss the evolution of value chain innovation in developing economies.

Discussions included innovations in sourcing, distribution, finance and information technology that benefit the economically disadvantaged in developing countries.

Economic Development Research Initiative

As part of the initiative, faculty members from the Stanford Graduate School of Business, Department of Economics, and the School of Medicine co-organized a Development Economics Workshop series.

Launched in September and already generating significant excitement, the series features scholars whose research focuses on micro-economic issues faced by firms, households, and governments in developing economies.

Workshops, held weekly on Wednesdays, already have formed the basis for related PhD and faculty reading groups and research collaborations.

» Schedule and Registration

Attendee Dr. Douglas Boateng, CEO PanAvest Partnership, South Africa
Funded research is closely aligned with SEED’s mission and covers a diverse range of topics and geographies:

- Identifying innovative private and public sector initiatives to promote a high-growth environment for young companies.
- Strengthening entrepreneurial ecosystems in developing economies.
- Increasing business literacy among women entrepreneurs in Mexico.
- Improving management practices and productivity in India’s textile industry.
- Testing governance innovations in Sierra Leone.
- Identifying behaviors that trigger acts of innovation among low-income populations in rural India.
- Testing ways to improve trade systems to open up new markets in developing economies.
- Developing new cacao production business models in Latin America that can add more value in-country.
- Evaluating the impact of public funds audit information on support for above-average public leaders in Kenya.
- Assessing the impact of export opportunity on Myanmar manufacturing firms productivity and growth.
- Measuring the performance effects of private equity investment on Indian firms.

How can supply chain management help solve issues related to poverty?

Many entrepreneurs in these developing economies struggle for a long, long time, because they don’t know how to increase their productivity. Supply chain management, through the use of simple, perhaps even mobile technologies, can help them remove bottlenecks, improve efficiency and expand their markets, sales and income.

Take the example of a farmer [growing shea nuts in Africa]. Should he just be growing the crop? Should he be doing processing? Should he be doing distribution? Or should he be doing the final step of creating the highest value, at the conversion of shea butter into ingredients for cosmetic manufacturing step? Well, not everyone should do it all. But we hope to help companies identify where the biggest opportunities lie.

Hau Lee is the Thoma Professor of Operations, Information and Technology at the Stanford Graduate School of Business. Lee, an expert in supply chain management, is the SEED Faculty Director for Value Chain Innovations and teaches Supply Chain at SEED’s regional innovation center in West Africa.
Can you give a specific example of how your human-centered design approach resulted in a better product?

I’ll give you an example from the *Extreme* course, where we use the human-centered design approach.

In Myanmar, which is largely a Buddhist culture, people are incredibly polite and conscious of putting their guests at ease. We would bring in prototypes [of potential products] and ask them, ‘What do you think?’ and the answers would be uniformly positive: ‘They’re wonderful! We like everything about them!’

You couldn’t get real feedback because people were so concerned about not offending you. So what did we do? We brought in two prototypes and asked, ‘Which one do you like better?’ No big deal – we adapted to their situation and made a better product.

[Another time] we made a mosquito net for migrant workers, and the only problem was that it looked just like the net they put over corpses at funerals. Not a big market for that, right? So we changed it. That’s why we prototype quickly: to have these conversations at a rapid rate and home in on something that will be culturally appropriate.

---

*James Patell* is the Herbert Hoover Professor of Public and Private Management and also the SEED Faculty Director for Product and Service Innovations. Patell teaches *Design for Extreme Affordability*, a popular two-quarter course at Stanford, and *Design Thinking and Operations* at SEED’s regional innovation center in West Africa.
**Why do firms in emerging markets find it so difficult to scale effectively?**

While an essential part of scaling is to identify market growth opportunities, in our view this is often not the limiting factor. Instead, one of the most critical hurdles is the creation of formal organizational structures and processes that allow for planning, control, and rapid growth in staff. The challenges to such formalization are universal, but they are accentuated in developing economies characterized by weak institutions, poor physical infrastructure and inefficient labor and capital markets.

Critical to the transition to formal organizational structures is a shift in mindset, from a view of the firm as a set of relationships between the specific people working there to a set of relationships between abstractly defined positions and roles. This is a shift from thinking about the particular people involved in the project, to the work that needs to get done. For example, you say that there’s a job called sales director, and that job has a defined set of responsibilities that are the same irrespective of who is in the job.

This is a hard transition for entrepreneurs all over the world—from being involved in everything and having your hands on every decision to stepping back and saying, ‘this is your responsibility and my job is to oversee whether or not this is all fitting together coherently.’ This is even more difficult in a developing economy context.

A central focus of our Transformation Programs is to help our program participants make this transition. Fundamentally, this is about transforming the mindsets of both the leaders and their employees. This process takes time, and is unique to every leader and every firm. This is why SEED’s volunteer business coaches are so essential to our program, and we have been so fortunate to work with coaches who understand these challenges so intimately.

**Jesper Sørensen** is the Robert A. and Elizabeth R. Jeffe Professor of Organizational Behavior at the Stanford Graduate School of Business, where he teaches Poverty, Entrepreneurship, and Development, among other courses.

Sørensen is also the newly appointed SEED Faculty Director and Faculty Director of Research.
